

Assignment-3
Due: April 2, 2019 @ 11:30 pm

In this assignment you will create a web page containing a form with various form controls. Use Notepad++/ or any text editor to create an html page containing a form that collects student's data. Save your assignment as Yourname_Assignment3.html.

Note:

- Use fieldsets and legends to arrange your page.
- Use CSS to format your page, rather than using
 tags.
- Include the HTML5 doctype.
- Include a title using the title tag.
- Display your name and student id as copyright.
- Nest your tags correctly.
- Indent code correctly.

Field 1: Title

- This should be a group of radio buttons with a label.
- The name for each radio button should be "title".
- The field should be required. Because radio buttons can be assigned to a group, making the first radio button required forces the user to make a selection from the group of radio buttons. The field should be autofocus.
-

Field 2: First Name

- This should be a text field with a label.
- You should have both an id and a name set to "fName".
- The field should be required.
- The maximum number of allowed characters should be 20.
- The field should have a placeholder.

Field 3: Last Name

- This should be a text field with a label.
- You should have both an id and a name set to "lName".
- The field should be required.
- The maximum number of allowed characters should be 20.
- The field should have a placeholder.

Field 4: Email

- This should be an email field with a label.
- You should have both an id and a name set to "email".
- The field should be required.
- The field should have a placeholder.

Field 5: Phone

- This should be a telephone field with a label.

- You should have both an id and a name set to "phone".
- The field should be required.
- The field should use the pattern to take a valid phonenumber.
- The field should have a placeholder.

Field 6: Date enrolled

- This should be a date field with a label.
- You should have both an id and a name set to "dateEnrolled".
- The field should be required.

Field 7: Major

- This should be a group of checkboxes with a label.
- Each of the checkboxes should include the attribute name="major".
- Options include: Business Information, Health and Medical Science, Computer Science, Information Technology, Master in Bussiness Administration.

Field 8: Indicate your GPA

- This is a range type with a label.
- You should have both an id and a name set to "gpa".
- The minimum should be 0.0.
- The maximum should be 4.0.
- The step should be 0.10.

Field 9: INFO Classes Taken

- This should be a select field with a label.
- The select field should have an id set to "classes" and a name attribute set to "classes".
- Multiple selections should be allowed.
- The first option should be selected.
- Options include INFO 10081, INFO 10082, SYST 1049, SYST10199, PROG 10689, and PROG 37721.

Field 10: Are you employed?

- This should be a group of radio buttons with a label.
- Each radio button should have a name set to "employed".
- The field should be required.

Field 11: If so, full time or part time?

- This should be a group of radio buttons with a label.
- Each radio button should have a name set to "employmentType".

Field 12: If you are interested in internships, etc., please upload your resume

- This should be a file field with a label.
- You should have both an id and a name set to "resume".

- Note that this field looks different in different browsers. The demo image was from Chrome.

Field 13: If you have ideas of how to improve...

- This should be a textarea with a label.
- You should have both an id and a name set to "comments".
- The field should allow 50 columns.
- The field should allow 5 rows.
- There should be no default text in the field.

Field 14: Submit Data

- This should be a button element of type submit. Note this is a button, not an input field!
- You should have both an id and a name set to "submit".
- The text should be "Submit Data".

Field 15: Reset Form

- This should be an input field of type reset.
- You should have both an id and a name set to "reset".
- The value should be "Reset Form".

Note: Once done, test the form with data. After you press the Submit button, if any error messages appear at the top or bottom of the resulting page then you should read them and fix the problem that caused them. Use CSS as needed.

Submit a .zip folder for your assignment. Name the folder as Yourname_Assignment3.zip
